

Combustion and Pollution Control in Heating Systems

Filesize: 1.42 MB

Reviews

Very good e-book and helpful one. It is among the most awesome publication we have read. Its been developed in an remarkably simple way in fact it is simply right after i finished reading this book through which basically transformed me, affect the way i really believe.

(Prof. Kacey O'Hara)

COMBUSTION AND POLLUTION CONTROL IN HEATING SYSTEMS

To download **Combustion and Pollution Control in Heating Systems** eBook, you should refer to the hyperlink below and download the document or have access to other information which are relevant to COMBUSTION AND POLLUTION CONTROL IN HEATING SYSTEMS ebook.

Book Condition: New. Publisher/Verlag: Springer, Berlin | The combustion of hydrocarbon fuels in heating systems is an important topic for students taking courses in building services and related areas including mechanical engineering. The control of pollution from this source is of increasing importance to planners, architects, builders, commercial and industrial property owners and legislators. Combustion and Pollution Control in Heating Systems provides a comprehensive coverage of this environmentally sensitive topic for the first time. The fundamental principles of the combustion process are explained. Special attention is given to the processes which take place in boilers. The author has extensive experience in teaching this subject at the Universities at Loughborough and Liverpool. | Combustion is very much an interdisciplinary topic, drawing together elements of chemistry, fluid mechanics and heat transfer. It is an ingredient in many undergraduate degree programmes, ranging from a pivotal role in fuel science through to a component part of courses in chemical, process and building services engineering. For many students in those disciplines where combustion in heating plant is an important part of their studies, there are often problems in coming to grips with the basic principles underlying the combustion of hydrocarbon fuels. In particular, the concepts of chemical and related thermodynamic changes can prove difficult to assimilate. The scientific literature dealing with combustion tends to be rather polarised, with a wealth of literature aimed at the specialist reader, but at a basic level the fundamentals of this important process are often treated rather tersely in textbooks on thermodynamics. The objective of this book is to provide an introduction to the basic principles of the combustion of hydrocarbon fuels in heating plant for buildings and industrial processes. In those chapters where practice in problem solving can make a positive contribution to understanding, some numerical problems have been...
